

precision parts. 06B metric roller chain is found in many industrial drive and conveying applications and has a pitch of 9.525 millimeters. Our metric chains dimensionally interchange with other brands but exceed in performance, strength, and working life. Implementing the use of heat-treated shot-peened components, factory pre-stressing, and premium lubrication have created an 06B chain that is made to last! We typically supply 06B-1 chain in 10ft boxes but it is also available in 5-meter boxes and larger length reels upon request, fore additional information please contact us and we will be happy to assist you.
